

Dear FCC,I am very concerned about the RF interference that Broadband Service Over Powerline will cause to the amateur radio service. I am an active amateur radio operator and utilize my amateur radio station for public service, emergency communications and international goodwill. Most of my operation is in the HF radio spectrum. If the FCC allows BPL service in my area, it will severely restrict my ability to effectively communicate during emergencies and public service events. I strongly urge the FCC to deny the request for the good of all users of the HF spectrum. Thank you.
